## New slim package for ESAB's VacPac range of stainless and Ni base electrodes

A new slim package for stainless and nickel electrodes is being launched from the beginning of June 2007. This new packing will provide a number of advantages:

- More economical ordering levels
- Lower value inventory
- Less risk of transport damage
- Easier to handle

One of the main advantages will be a more convenient and economic order volume for high value items in the smaller dimensions. The average outer box weight reduces to approximately 4 kilos.

These reduced size packs will enable you to decrease your stock value for slower moving items and greatly reduce additional handling. Not only that but there is improved transport protection and easier handling.

The range that will be launched in this slim pack will be our current range of VacPac stainless steel and nickel electrodes in the dimensions up to 3.2mm, both in 300 and 350mm.
